MANUAL DUN FOR: Director of Control Intelligence

THEU

1 Dopaty Director (Intelligence)

SUBJECT

s Flying Saucors

1. mosum

So determines

e. Whether there are national security implications in the problem of funicantified flying objects i.e. flying scuceres

b. the theredequate stody end-reserved is currently being directed to this problem in its relation to such mational accurity implications; and

- c. What further investigation and research should be instituted, by show, and under what accis.
- 2. PACTO EZARINI ON THE PROPURT
- c. Of has investigated the work currently being performed on flying sourcers end has found that:
 - (1) The only unit of coverment currently studying the problem is the Directorate of Intelligence, USAF, union has charged the Air Technical Intelligence Center (AII) with responsibility for investigating the reports of sightings.
 - (2) At ATIC there is a small group consisting of a reserve Captain, two lieutenents and two secretaries to which come all reports of similars through official chappels, and which conducts investigation of the reports either itself or through consultation with other Air Ferce officers or with civilian technical consultants.
 - (3) A vorth-wide resorting system has been instituted and rajor Air cores asses have been ordered to make interceptions of unidentified flying objects.
 - (h) The research being carried on is strictly on a case basis and appears to be designed solely to attempt a national example planation of each imitidual sighting as it occurs.
 - (5) ATEC has concluded an arrangement with fattelle Memorial Institute for the latter to establish a mechine indexing system for official reserve of sightings.

1. PROBLEM

To determine)

- e. Thether there are national security implications in the problem of funidentified flying objects i.e. flying saucers;
- b. the ther edequate study and research is currently being directed to this problem in its relation to such methoral accurity implications; and
- c. What further investigation and research should be instituted, by show, and under what socia.
- 2. FESTS EZARIM ON THE PROBURN
- e. Osl has inventigated the work currently being performed on flying sourcers and has found that:
 - (1) The only unit of comment currently studying the problem is the Directorate of Intelligence, USAF, union has charged the Air Technical Intelligence Center (ATA) with responsibility for investigating the reports of signtings.
 - (2) At ATIC there is a small group consisting of a reserve Captain, two lieuterents and two secretaries to which come all reports of similars through official channels, and which conducts investigation of the reports either itself or through consultation with other Air Force officers or with civilian technical consultants.
 - (3) A world-wide remorting system has been instituted and rajor Air cores rases have been ordered to make interceptions of unidentified flying objects.
 - (h) The research toing carried on is strictly on a case basis and appears to be designed rolely to attempt a natisfactory explanation of each imitimal significance as it occurs.
 - (5) ATIC has concluded an arrangement with fattalla Memorial Institute for the latter to establish a median indexing system for official reports of significa-

(6) Since 19k7, ALE has received approximately 1993 official reports of sighting plus an enormous volume of letters, phone calls and press reports. Euring the north of July 1992 along, official reports totaled 290. Of the 1900 reports, fir force carries 20% as unevaluited and of those received January through July 1992 it carries 20% unevaluited.

3. Diccumsion

8. CSI entered into its inquiry fully aware that it was coming into a field elready charged with pertisanthip, one in which objectivity had been overridden by manarous sentational writers, and one in which there are pressures for extravagant explanations as well as for oversimplification. The OSI Tean consulted with a representative of hir Force (rescal-Itulies Group) discussed the problem with those in charge of the hir Force (reject at wright field; reviewed a combinerable volume of intelligence reports; checked the Foviet press and breadoust indices; and conferred with three was concultants, all leaders in their scientific fields, who were chosen because of their broad knowledge of the technical areas concerned.

b. CEI found that the ATIC sindy is probably valid if the purpose is limited to a case-by-case explanation. Ecover, the study makes no attempt to solve the nore fundamental aspect of the problem which is to determine definitely the nature of the various phanemens which are causing these signification or to discover means by which these causes and their visual or electronic effects may be immediately identified. Our consultant peral-stated that these solutions would probably to found on the margine or just beyond the frontiers of our present knowledge in the fields of electronic longstarie, and extraterrestrial phenomena, with the solut possibility that our present dispersal of michael waste products might also be a factor. They recommend that a simily group to formed to perform three functions:

- (1) Analysis and systematice the factors of information which form the funiteertal problem;
- (2) Determine the fields of furthmental science which must be investigated in order to reach an understanding of the phononom involved; and
- (3) Naka recommendations for the initiation of appropriate research.

Dr. Jelius A. Stratton, Vice President of the Massachusetta Institute of lechnology, has imitated to the that much a group could be committed at that haddure. Similarly, Project Macola, the Air Force air defense project at AIR, could be carried with these responsibilities.

L. comming

- a. The flying scacer citaction contains two elegents of danger which, in a situation of international tension, have national security implications. These are:
 - (1) Prochological With world-wide sightings reported, it was found that, up to the time of our investigation, there had been in the Fuesian press no report or commant, even catifical, on flying saucors, though Andre Growke had rade one busorous contion of the subject. With a State-controlled press, this could result only from an official policy decision. The question, therefore, trises as to whether or not these sightings:
 - (a) Could be controlled,
 - (b) Could be predicted, and
 - (c) Could be used from a psychological warfare point of view either offensively or defensively.

The public concern with the observers, which is reflected in the United States press and in pressure of inquiry upon the Air Force, indicates that there is a fair proportion of our population which is remittly conditioned to the acceptance of the incredible. In this fact lies the potential for the teaching-off of pass hysteria and punic.

(2) Fir Viltorability - The United States Air Warning System will undoubtedly always depend upon a continuition of rador serventing and visual observation. We give music the present depolitity of delivering an air attack against us, jet at any given moment new, there may be current a dozon official unidentified slightings plus many unofficial. At any moment of attack, we are now in a position where we cannot, on an instant basis, distinguish hardware from thenton, and as tension meants we will run the increasing rick of false eleric and the even greater danger of falsely identifying the real as phenton.

b. Fold of there problems are orderedly operational in nature but each contains readily apparent intelligence factors. From an operational point of view, three actions are required:

(1) Irrediate stops should be taken to improve identification of both visual and electronic management to that in the event of an attack, instead and positive identification of energ places or missiles can be made.

- (2) A study should to instituted to determine that, if any, utilization could be rade of these themsens by united States pascuological variers pleasure, and most, if any, defenses should to plaused in anciclostion of Soviet etternts to utilize them.
- (3) A mailtonal policy should be established as to that should be told the pullic regarding the phenomena, in order to minimize risk of panic.
- c. Intelligence problems include:
- (1) The present level of Puszian knowledge regarding these photomera.
- (2) Possible Soviet intentions and espabilities to utilize these pheumons to the delibent of US security interests.
- (3) is a reasons for silence in the soviet Press regarding flying sources.
- d. Intelligence responsibilities in this field as regards both collection and enarysis can be discovered with maximum effectiveness only after much nore is known regarding the exact mature of these phenomena.
- o. The problem transcends the level of individual departmental responsibilities, and is of such importance as to marit commissance and action by the Mational Security Council.
- f. Additional research, differing in character and emphasis from that presently being performed by Air-Force, will be required to meet the specific needs of both operations and intelligence.

S. Receptions

It is recommind that:

e. The firector of central intelligence edule the interest Scrarity council of the security inclications interest in the flying scalar product with the request that, under his statutory coordinating authority, the Director of Central Intelligence he exponered to initiate through the appropriate agencies, either within or without the appropriate, the investigation and research measury to solve the proling of instant positive identification of "unidentified flying objects"

the contract with the contract removed bilities, and in contraction with the contract leaf thratery round, investigately investigate passible of the citerative or defensive utilization of the phenomena for psychologiately across murposes both for and arrivat the delted states, edvicing these agencies energes with ver internal security of any pertinent

findings affecting their areas of responsibility.

c. On the hosis of these programs of research, Old develop and recommend for exception by the landscal Country Council a policy of public information which will minimize the rick of panic.
